Release Notes

PocketBook Touch Lux 3

FW Version   5.12
Localization   World Wide
Developed by   Obreey Products

Implemented:

1. *PocketBook Cloud* functionality provides customers with several notable features:

  •Keeps user's eBooks in one safe place: use this feature to be sure your book is secure.

  •Automatically synchronizes Reading positions, Collections and Favorites to all of the platforms: Android, iOS and the Web. Now one can easily access the downloaded book from any device and continue reading from the point where one left off.

This functionality is currently available only for customers of PocketBook partners' book stores. The list of stores can be found here: *https://cloud.pocketbook.digital/browser/#/find-store*

2. Supports multiple Adobe accounts.

3. Automatic Adobe ID registration makes the completion of DRM-protected books easy.

4. Smooth completion of *acsm* files:

  •Completion and opening process is displayed over the *acsm* icon.

  •Book opens directly after the process of *acsm* file completion is over. No more dialog windows questioning whether a book should be opened or not.

  •The *acsm* file is removed from the device and the Cloud account, right after the DRM-protected book is opened.

5. *Bookshelves* were renamed to *Collections*. *Favorites* now is a book option.

6. *Favorites* is a particular mark for a book now. It is no longer one of the *Bookshelves* (now *Collections*) option.

7. *Library* performance was enhanced in order to work more efficiently with a large number of books.

8. Now one can accurately adjust *Font* and its size using Reading Settings menu in a Reader's applications.

9. Browser performance application was enhanced.

10. Syncing process is indicated in *Status bar*.

11. Macedonian localization was added.

Fixed:

1. Extra updates while performing search in the *Library* application.

2. Occasional improper *Italic* font usage when changing it in the *epub* formatted books.

3. Connection to the hidden Wi-Fi networks.
